

QGIS Application - Bug report #2887

Large dbf file with export from postgis to shape

2010-07-15 03:24 AM - tilt -

Status: Closed	
Priority: Low	
Assignee:	
Category: Data Provider	
Affected QGIS version: master	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: end of life
Crashes QGIS or corrupts data: No	Copied to github as #: 12947
Description	
Reproduce: 1. Open postgis table in qgis. 2. Save as shapefile	
Same postgis table exported via pgsq2shp gives 4x smaller dbf file. Does not happen with every dataset. It seems that the varchar fields are exported as textfield with length 255. Also some numeric fields are exported as text with length 21.
