| **Affected QGIS version:** | | **Regression?:** | No | |
| **Operating System:** | Linux | **Easy fix?:** | No | |
| **Pull Request or Patch supplied:** | | **Resolution:** | fixed | |
| **Crashes QGIS or corrupts data:** | | **Copied to github as #:** | 10349 | |

**Description**

1. digitize 2 points in 'next not used mode'

2. 'Edit attributes' of 1 of them

3. 'delete' the category

4. 'Edit attributes' of another one

5. 'delete' the category

6. now 'Edit attributes' of both - as you see only in the first case the cat was deleted

You would need to exit and start 'Grass edit' again.

This doens't depend on the number of features. I just used 2 to make a clear example.
