

QGIS Application - Bug report #291

'Save as Image' is bogus

2006-09-22 01:23 PM - Redmine Admin

Status: Closed	
Priority: Low	
Assignee: Gary Sherman	
Category: GUI	
Affected QGIS version:	Regression?: No
Operating System: Linux	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10350
Description	
File -> Save as Image saves as jpeg, but:	
1. Why jpeg after all? I'd want a png or tiff and let myself convert later if needed - jpeg is lossy and I might need a good quality picture.	
2. Doesn't tell what format it will be.	
3. Doesn't set the extension.	
4. Once it shows this is an jpeg what was saved, I find it strange that I had no possibility to tune the quality.
