

QGIS Application - Feature request #2912

TableManager should support multiple file formats

2010-07-28 06:28 AM - Médéric RIBREUX

Status: Closed	
Priority: Low	
Assignee: Borys Jurgiel	
Category: Python plugins	
Pull Request or Patch supplied:	Resolution: invalid
Easy fix?: No	Copied to github as #: 12972
Description	
<p>[[TableManager]] is a Python plugin to add/delete/rename the fields of a layer. For the moment, it seems to support only SHP files (saves in or saves as) and [[PostGIS]] tables.</p> <p>Now that QGis can save a layer in each ogr supported formats, [[TableManager]] could do the same... (don't know how for the moment).</p> <p>I have quickly read the plugin code (version 0.2.2) and there are some specific functions (writeToShp) that should be modified with the (hypothetic) new QGis SDK enhancements.</p>

I'm working on it, but still got frequent crashes with some formats. I'm closing this ticket as this trac isn't suitable for external plugins (we'll create separate trac for them).
