

QGIS Application - Bug report #2925

Loading WMS tiles causes strange behaviour

2010-08-02 03:01 PM - Gavin Fleming

Status:	Closed	
Priority:	Low	
Assignee:	Marco Hugentobler	
Category:	Web Services clients/WMS	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 12985
Description		
Using the WMS loader to load tiles from a tilecache server for the first time after loading a few WMS layers caused the whole QGIS GUI to resize several times, change order with other open apps (ending up below them), as well as to shunt all apps from multiple desktops onto desktop 1!		

History

Hi,

I'm not seeing this. I'm also on Ubuntu 10.04 with qgis 1.5.

As wms server I used

<http://mapas.igeo.pt/wms/igp?>

and as tilecache server I used

<http://beja019.edia.pt/mapasigeopttilecache.xml>

Might that also be related to third party plugins (see also #2927)?

#3 - 2011-03-02 07:56 AM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Open to Closed

I cannot reproduce this: please check and reopen if necessary
