

QGIS Application - Bug report #296

second shape vector layer added is not displayed

2006-09-22 03:24 PM - Redmine Admin

Status: Closed	
Priority: Low	
Assignee: Martin Dobias	
Category: Map Canvas	
Affected QGIS version:	Regression?: No
Operating System: Linux	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10355
Description	
1. add a first shape vector layer - it is displayed	
2. add another one, more/less located within the same region - it's not displayed	
Turning layers of/on doesn't help. Refreshing neither.

Does the second datasource load and display fine if you do it first?

Try clicking on the 'zoom to full extents' button.

Can you attach the two shape files?

#2 - 2006-09-23 02:20 AM - Redmine Admin

Partly my bad. The reason of the mess is that the two shapefiles are in different projections.

But I didn't notice that at first QGIS didn't handle the situation:

1. add layer odra_glogow_brzeg.shp - it is rendered
2. add the rzeki_ds.shp, it is not - nothing changes on the display
3. so I zoom to rzeki_ds layer extent, as my first reaction, and the extent changes but I still don't see my second layer! I still see the odra_glogow_brzeg one, zoomed-out, instead!
4. only when I 'zoom to full', I can see them both, separated with a big distance
5. but again, if I zoom to **each particular layer's** full extent, I always get only the odra_glogow_brzeg layer displayed, in two different zoom levels

This is a real bug. I'm attaching the shapefiles.

A related wish: IMO, if on-the-fly projection is disabled, QGIS should inform the user that the second layer he is trying to open is in a different projection and

ask if he want's to enable the on-the-fly projection using one of the 2 projections (user chooses which one).

- *Resolution set to fixed*
- *Status changed from Open to Closed*

Fixed in commit:e1718bbc (SVN r5961).

The wish is not included in fix but feel free to file it as an enhancement for future version.
