I guess you are missing some qt library. Could you try again on a clean installation, and check whether the lib is actually present somewhere on your system?

Thanks.

- Resolution set to fixed
- Status changed from Open to Closed

Known issue. Please try again with the new standalone installer, and reopn the ticket if necessary.

- Status changed from Closed to Feedback

yes I know: Windows is THE problem...

#4 - 2010-11-09 12:26 AM - Giovanni Manghi

No, the problem is not Windows nor QGIS, the problem are the applications that do place around copies of the [[QtCore]]?4.dll library.

In Portugal you'll get this error if you install the application "cartão do cidadão", a program that let you use (trough a usb sim card reader) your digital signature.

I don't know if there is any way to handle this situations qgis side, let see what the devs say, meanwhile remove the program that may have installed this library and you'll get QGIS starting.

Precisely as jef stated! a conflict with the Portuguese "Cartão do Cidadão" application.

After removing the "Cartão do Cidadão" application no more errors and QGIS starts...
Thank you very, very much!

Replying to [comment:5 jalmeida1968]:

 | Precisely as jef stated!

it wasn't Jurgen (Jef), it was me Giovanni (lutra) ;)
