

QGIS Application - Bug report #2983

New Gamma Parameter For Oblique mercator Not Accepted

2010-09-06 05:35 AM - alexckp -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Projection Support	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 13043
Description		
<p>Frank Warmerdam recently updated the proj4 trunk codes for OSgeo4w to enable the gamma parameter. I downloaded the latest nightly qgis build and found the gamma parameter works when using custom crs test box. I was also able to save the newly defined parameters as a customized crs.</p> <p>However, when I checked the parameters in the layer properties, the gamma parameter is still somehow rejected and I am therefore still unable to reproject the layer to wgs84 coordinates. Could it be that the proj4 codes are not properly compiled into the nightly build?</p>		

History

#1 - 2010-12-23 11:36 PM - alexckp -

- Resolution set to fixed
- Status changed from Open to Closed
