Description

I used QgisMapServer and noticed the problem - if I often run getFeatureInfo (from QGIS or OpenLayers), qgis_mapserv.fcgi starts to use a lot of memory and not release it after.

For 1 minute the process has grown more that 800 MB of memory. This happens even if the receive information on the same point. This behavior is very similar to a memory leak.

History

#1 - 2010-09-11 07:17 AM - Marco Hugentobler

- Resolution set to fixed

- Status changed from Open to Closed

The memory leak is fixed in commit:52e58915 (SVN r14220). Please test and reopen the ticket if it does not solve the problem.
