

QGIS Application - Bug report #308

a 3D polygon SHP won't open in QGIS, but opens fine in OpenEV

2006-09-25 09:46 AM - Redmine Admin

Status:	Closed		
Priority:	Low		
Assignee:	Gary Sherman		
Category:	Data Provider		
Affected QGIS version:		Regression?:	No
Operating System:	Linux	Easy fix?:	No
Pull Request or Patch supplied:		Resolution:	fixed
Crashes QGIS or corrupts data:		Copied to github as #:	10367

Description

Trying to open the attached file I get an error:

```
$ qgis tmp/ManyBuildings/ManyBuildings.shp
ERROR 4: @/home/shoofi/tmp/ManyBuildings/ManyBuildings.shp' not recognised as a supported file format.
```

```
[[QgsSpatialRefSys]]::createFromProj4 error proj string supplied has no +ellps argument
WARNING: This code (file qgsvectorlayer.cpp, line 1337) should never be reached. Problems may occur...

WARNING: This code (file qgsvectorlayer.cpp, line 1337) should never be reached. Problems may occur...
```

Though the file opens fine in [[OpenEV]] that comes with FWTools 1.05 and is recognised properly by ogrinfo.

History

#1 - 2006-09-25 09:51 AM - Redmine Admin

The file is to big to upload it to trac. Here's the link:

<http://kufaya.googlepages.com/ManyBuildings.tar.bz2>

#2 - 2006-09-25 10:08 AM - Redmine Admin

A few heading lines in the code bit a bove is bogus. They don't popup if I load the shapefile via GUI. See my recenet report [<https://svn.qgis.org/trac/ticket/309>].

It doesn't change the fact the shapefile is still not visible after loading, though it's present on the layer list and stuff.

The file at kufaya.googlepages.com appears to be truncated. Can you re-upload it?

#4 - 2006-09-26 11:39 AM - Redmine Admin

I can download the <http://kufaya.googlepages.com/ManyBuildings.tar.bz2> and unpack it with mc or Gnome's file-roller OK. No need to re-upload.

- *Status changed from Open to Closed*

- *Resolution set to fixed*

Fixed in . Note that Z value of the point is not used at all.
