

QGIS Application - Bug report #3142

ubuntu grass dependency (Ubuntu Maverick)

2010-10-21 02:14 AM - olivier -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Build/Install	
Affected QGIS version:	Regression?: No
Operating System: Debian	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 13202

Description

The qgis-plugin-grass package from <http://qgis.org/debian-nightly> depends on GRASS 6.4.0 RC6 (grass640+42329) while the final version (grass) is out and available on [[UbuntuGIS]] repository...

As a result, since I have the stable version of GRASS installed, I can't install QGis' plugin.

History

#1 - 2010-10-21 05:58 AM - Jürgen Fischer

- Resolution set to wontfix
- Status changed from Open to Closed

The nightly builds only use the "official" repositories from debian and ubuntu - mainly to test if qgis builds there. For everything else I'd recommend building own packages (which should work fine with packages from ubuntuGIS).

#2 - 2010-10-21 09:01 AM - olivier -

you could make it depend of grass640+42329 OR grass (>= 6.4.0)
