

QGIS Application - Feature request #3208
exclude proxyes based on suffix

Easy fix?:	No	Copied to github as #: 13268
Description		
<p>Currently proxies can be excluded on a case by case basis, and groups of addresses can be reached directly. The criterion for exclusion seems however based on the first characters (myurl*). It would seem very useful to have the possibility of defining addresses based on the last characters (*myurl.it).</p>
