Crashes QGIS or corrupts data:		Copied to github as #: 13276

Description

This mapfile is working without problems on qgis 1.4:

```

From 1.5 to the trunk r14547 I'm having the following problems:

1. When I try to select the layer under the number 1 it is automatically selecting the name of my map under number 0. It happens even when I have more than 1 layer.
2. The output format is not automatically selected to jpg like it was working on qgis 1.4.

Please check again with 1.6 or trunk. I cannot reproduce it. Thanks.

- *Resolution set to worksforme*
- *Status changed from Open to Closed*

probably solved. closing for the lack of feedback.
