Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	13293

Description

I have a personal geodatabase with multiple languages including arabic, chinese, russian (Cyrillic) and english. (enclosed) When I add a vector to my map from this .mdb, there are no issues and it adds a layer no problem. However, opening the attribute table shows that any of the characters of the three languages simply are turned to "?"*n

I imagine that there is an encoding issue, but any thoughts on how to arrange this?

Can you attach the .mdb file, or a part of it with few lines from every language if it's big? We'll try to reproduce this bug.

#2 - 2011-12-16 01:55 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

#3 - 2012-04-16 06:24 AM - Paolo Cavallini

- Crashes QGIS or corrupts data set to No

- Target version changed from Version 1.7.4 to Version 1.8.0

- Affected QGIS version set to master
