Crashes QGIS or corrupts data:		Copied to github as #: 13361
Description		
QGis 1.6.0-1 Standalone Installer for Snow Leopard Intel crash at startup.		

History

#1 - 2010-12-07 06:29 AM - William Kyngesburye

There is no standalone this for this release. If you were using the previous standalone version, you probably forgot to install the frameworks for this release. See the readme or the info on the download page.

If that's not the problem, check Console.app for a crash report.

- Status changed from Open to Closed
- Resolution set to fixed

Sorry... I misunderstood the installation conditions. Thanks
P.S. Will be released the Standalone version?

- Status changed from Closed to Feedback
- Resolution deleted (fixed)

There won't be a standalone this time. There is a problem running some of the GDAL Tools.
