Pull Request or Patch supplied:		**Resolution:**	fixed
Easy fix?:	No	**Copied to github as #:**	13380

Description

Following from message on qgis-user list at

http://lists.osgeo.org/pipermail/qgis-user/2010-December/010628.html

relating to QGis crash caused by delimited text plugin. This error appears to be due to reading files with variable number of fields, which is tested in the provider constructor function, but not in the nextFeature function.

The attached patch should fix this. It takes a slightly different approach to previously - instead of ignoring lines with the wrong number of fields, it adds blank strings to ensure that there are the expected number.

Also fixes a problem with line number counting.

History

#1 - 2010-12-11 11:16 AM - Gary Sherman

Patch applied at commit:b52d0743 (SVN r14891). Thanks!

#2 - 2010-12-11 11:16 AM - Gary Sherman

- Resolution set to fixed

- Status changed from Open to Closed
