<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 13381
<b>Description</b>		
<p>Hi</p> <p>I can open Quantum GIS no problem but when I click add vector layer and get a browse dialogue box it crashes when I try to find the data for the vector layer. I've attached a bug report to this ticket.</p> <p>Thanks for your help</p> <p>Cheers</p> <p>Casper</p>		

#### History

I cannot replicate this. Can you help us reproducing it?

##### #2 - 2011-03-05 02:33 AM - Volker Fröhlich

Please always try to have all necessary debuginfo packages installed when providing a backtrace. The "???" indicate missing packages.

##### #3 - 2011-03-05 02:47 AM - Jürgen Fischer

- Resolution set to worksforme

- Status changed from Open to Closed

After 3 months? Well, the backtrace is probably good enough as it points somewhere into GTK. I suppose if the problem is still reproducible at all, it disappears when switching the desktop environment.

Doesn't look like a QGIS problem to me. So I close it. Feel free to reopen, if the problem persists.
