

QGIS Application - Bug report #3333

GdalTools: strange responsiveness of multiple files selector

2010-12-14 03:01 AM - Giuseppe Sucameli

Status: Closed	
Priority: Low	
Assignee:	
Category: GDAL Tools	
Affected QGIS version: master	Regression?: No
Operating System: Debian	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 13393
Description	
<p>In Merge tool, but this might be also the case for other tools.</p> <p>Compared to regular QGIS raster selector the selector in Merge is somewhat strange while selecting multiple rasters while dragging mouse.</p>	

History

#1 - 2011-12-16 01:49 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

#2 - 2011-12-23 09:40 AM - Paolo Cavallini

- Pull Request or Patch supplied set to No

- Affected QGIS version set to master

- Crashes QGIS or corrupts data set to No

- Status changed from Open to Feedback

Hello, bug triage...

I have seen some differences between the QFileDialog of the main QGIS Raster selector and the GDALTools selectors but they have the same behaviour in selection:

- on QGIS Raster selector, you can take files and move them from a directory to another. Same thing with GDALTools.
- on QGIS Raster selector, you can add/remove files by pressing Ctrl+click. Same thing with GDALTools.
- on QGIS Raster selector, you can select multiple files and drag them where you want. Same thing with GDALTools.

The only difference is that the QFileDialog in GDALTools doesn't look like a native file selector on MS-Windows (not the same shortcuts on the left). On Debian, they are exactly the same.

What do you meant by "strange responsiveness of multiple files selector" ?

- *Resolution set to worksforme*

- *Status changed from Feedback to Closed*

Hello, bug triage...

I am closing this bug report for lack of feedback and because I can't find any "strange responsiveness" in Merge file dialog.

Feel free to reopen it with more explanations...
