

QGIS Application - Feature request #3370
Support style self-load for spatialite/postgis

2010-12-24 08:44 AM - aperi2007 -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Map Canvas	
Pull Request or Patch supplied:		Resolution: duplicate
Easy fix?:	No	Copied to github as #: 13430
Description		
<p>When add a shapefile to the canvas, if there is a style (qml) with the same name of shapefile it is load automatically.</p> <p>It would be very useful to hav a similar action for a table-layer.</p> <p>It could be use the same paradigm used for the shapefiles:</p> <p>Infact as for a shapefile the style to be self-load must be available in the same folder and with the same name of the shapefile but with qml extension,</p> <p>for a table/view (spatialite/postgis) layer the style , to be self-load, could be available in a table with "_qml" postfix.</p> <p>For example for the table</p> <p>"rivers" the style could be retrieve automatically if exist a table with name "rivers_qml", in the same database and same schema.</p>
