

QGIS Application - Bug report #3390

crash on start of QGIS due to conflict between Python versions

2011-01-05 06:36 AM - kapitonenko -

Status: Closed	
Priority: Low	
Assignee: Borys Jurgiel	
Category: Python plugins	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: invalid
Crashes QGIS or corrupts data:	Copied to github as #: 13450

Description

When I start QGIS I've got the next error:

"An error occurred during execution of following code:
import os

can't import traceback

Python version:
2.5.2 (r252:60911, Feb 21 2008, 13:11:45) [MSC v.1310 32 bit (Intel)]

QGIS version:
1.6.0-Capiapo 'Capiapo', exported

Python path:
[\"C:\\OSGeo4W\\apps\\gdal-17\\pymod\", 'C:\\Python26', 'C:\\Python26\\Lib', 'C:\\Python26\\libs', 'C:\\Python26\\Lib\\site-packages', 'C:\\Python26\\Lib\\site-packages\\dbfpy', 'C:\\OSGeo4W\\bin\\python25.zip', 'C:\\OSGeo4W\\apps\\Python25\\DLLs', 'C:\\OSGeo4W\\apps\\Python25\\lib', 'C:\\OSGeo4W\\apps\\Python25\\lib\\plat-win', 'C:\\OSGeo4W\\apps\\Python25\\lib\\lib-tk', 'C:\\OSGeo4W\\apps\\qgis\\bin\"]

It seems like conflict between python version 2.6.2 installed on my computer and 2.5.2 included in QGIS. When I renamed my directory C:\\Python26 to C:\\Python26_bak problem was disappeared.

History

#1 - 2011-01-12 07:46 AM - kapitonenko -

I've removed system environment variable PYTHONPATH and problem is disappeared.

#2 - 2011-01-13 12:54 PM - Jürgen Fischer

- Resolution set to invalid

- Status changed from Open to Closed

right, you should use OSGeo4W's python.
