

QGIS Application - Bug report #3401

WMS authentication not using stored credentials

2011-01-10 04:20 AM - tarvokurm -

Status: Closed	
Priority: Low	
Assignee: Marco Hugentobler	
Category: Web Services clients/WMS	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 13461
Description	
<p>I cannot get HTTP authentication to work for WMS layers in QGIS 1.5 and 1.6. It does work in QGIS 1.4.</p> <p>How i expect it to behave: Layer->Add WMS Layer->Edit->Enter name, URL, username, password->Ok->Connect->Add When I toggle the layer active in the left "layers" panel, the WMS image will appear.</p> <p>How it behaves in 1.6: I toggle the layer active in the left "layers" panel. A new dialog will appear saying "Enter Credentials" Username..... Password..... Authentication required [OK] [Cancel]</p> <p>Now, when I enter the username and password again (I already entered them when defining the layer!) the WMS image will appear.</p> <p>Some extra info: Geoserver 2.1b3 as password protected WMS server. QGIS-1.6 windows stock install. The layer source in layers properties are in the form of: „username=foo,password=bar,url=http://mygeoserver:9090/geoserver/wms?SERVICE=WMS&VERSION=1.1.1“</p> <p>Could be related to ticket #2967</p>
