

# QGIS Application - Bug report #3412

## crash when double clicking edit table button

2011-01-15 12:05 PM - ravn -

<b>Status:</b> Closed	
<b>Priority:</b> Low	
<b>Assignee:</b>	
<b>Category:</b> GUI	
<b>Affected QGIS version:</b> master	<b>Regression?:</b> No
<b>Operating System:</b> Debian	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b> No	<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b> Yes	<b>Copied to github as #:</b> 13472
<b>Description</b>	
To reproduce: Select a postGIS layer open the attribute table click fast twice on the edit button to edit the table	

### History

#### #1 - 2011-01-17 05:00 AM - Giovanni Manghi

I cannot replicate it on my Ubuntu (10.04) box. Using trunk too.

#### #2 - 2011-01-19 01:41 AM - ravn -

Sometimes I have to click more than twice, and fast. I think this has something to do with one process not finishing in time or something, it looks like it is some sort of race problem. Anyway I compiled the svn trunk and got some symbols, don't know if this makes it easier, but it still crashes:

Warning: QPainter: Cannot destroy paint device that is being painted

Program received signal SIGSEGV, Segmentation fault.

### #3 - 2011-02-19 02:11 PM - Giuseppe Sucameli

Looking at the backtrace, this issue is probably related to #2714.

### #4 - 2011-12-16 01:50 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

### #5 - 2011-12-23 07:00 AM - Giovanni Manghi

- Status info deleted (0)
- Crashes QGIS or corrupts data set to No
- Status changed from Open to Closed
- Assignee deleted (nobody -)
- Affected QGIS version set to master
- Pull Request or Patch supplied set to No
- Resolution set to fixed

Not replicable on both Windows and Linux with master and 1.7.3. Probably already fixed as commented by Giuseppe. Reopen if necessary.
