Crashes QGIS or corrupts data:	Copied to github as #: 10401

Description

GRASS Mapcalc - Says "no GRASS raster maps currently in QGIS". I am familiar with GRASS from version 1.0. But when I pick GRASS Tools/Mapcalc and click on the "plus raster layer" icon, I get the "no GRASS raster maps currently in QGIS" even though two have already been loaded into the viewer window. Is this broken or is there another route that I have missed. Thanks, Bob
