

QGIS Application - Bug report #3448

Basic Printing not Properly Working under Windows.

2011-01-28 12:31 PM - Thaddeus -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category:	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: duplicate
Crashes QGIS or corrupts data:	Copied to github as #: 13508

Description

I (Linux user) talked a few people (they use Win) into QGIS. The thing is that I never noticed this Composer print corruption before (only under Windows, prints OK under Linux, except for some extremely long, long, slow font-outline PS code --will make another ticket for that).

To reproduce (use qgis 1.5 or 1.6 under win2k, xp, 7):

- 1) open geo-referenced raster (on the fly CRS on).
- 2) trace any thing on it using shp line.
- 3) open composer, add 1 object, a map rectangle & use defaults (A4, 300dpi)
- 4) export to PDF as vector.
- 5) review output PDF: image is off place some inches and PDF file is huge* in size having weird manufactured image streams inside and the shp trace is an image.

- after unzipping streams using PDFtk.

Does NOT happen with QGIS 1.4.

History
