Hello, bug triage...

I don't know what you mean by "but any of fields of vector layer".

In the Processing tool "Singleparts to multipart" you can choose any field to act as the unique ID field (field to merge two features together). I don't know if you would like to merge features together when more than one fields are equals ? Could give me an example of what you would like to do ?

Hello, bug triage...

I am closing this feature request for lack of feedback and because Processing tool can do what is described...
