

QGIS Application - Bug report #3487

Select features by rectangle does not work properly

2011-02-14 10:43 AM - elewis52 -

Status: Closed	
Priority: Low	
Assignee:	
Category: Vectors	
Affected QGIS version: master	Regression?: No
Operating System: Debian	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 13547
Description	
<p>Using the rectangle select tool, does not work properly. The tool selects some features inside the selected rectangle as well as selecting features outside the selection rectangle. This problem appears when a <code>[[MySQL]]</code> point data table is entered as a vector layer. This is similar to other bugs reported and fixed some time ago for shape files. This problem impacts <code>[[MySQL]]</code>; it does not appear to impact shape files. Selection from shape files appears to work properly</p>

confirming.

Same problem here with select attributes by a circle, on a `[[PostGis]]` layer.

- Pull Request or Patch supplied set to No

Hi,

I have a similar problem here for a shape point layer under windows 64bit QGIS 2.2 and 2.4. Only some points within a rectangle are shown as selected.

Can this be a hardware problem? Because it happens only on one PC and another one works fine.

Regards

Otto

- *Status changed from Open to Feedback*

Hello, bug triage...

I can't reproduce it on PostGIS Point layer using all the selection tools. Do you still have it ? If it is the case could you attach a data set where the bug occurs ?
