QGIS Application - Bug report #3494
Gibberish in file names after splitting layer

2011-02-16 02:34 AM - dr -

Status:	Closed			
Priority:	Low			
Assignee:				
Category:	Vectors			
Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	worksforme	
Crashes QGIS or corrupts data:		**Copied to github as #:**	13554	

Description

1. Open file (see attachment);

2. Vector - Data Management Tools - Split vector layer;

3. Choose field "FO";

After splitting finished file names contains gibberish, for example: OGRGeoJSON_FO+Äàëüíåâîñòî÷íûé.dbf, but *.qpj files look fine.

History

#1 - 2011-02-20 01:44 AM - dr -

- Resolution set to worksforme

- Status changed from Open to Closed
