Description

Hi, I've noticed that when I select points within a polygon with a popular GIS (debateable) I have a higher hitrate than when doing the same in QGIS. After investigating the differences I found that with complex polygons - see attached images (The layer used was the UK's Ordinance and Survey's Master Map) points were ignored by QGIS and not by the other. I thought I'd take the time to let you know.

Cheers

François

Hello, bug triage...

I can't reproduce it on QGIS 2.13 with a complex polygon (with holes).

I think we can close it but let me know if you can test it against your data.
