

QGIS Application - Bug report #3606

Field calculator inserts real values to the attribute table instead of rounding them to the field precision.

2011-03-14 01:53 AM - Borys Jurgiel

Status: Closed	
Priority: Low	
Assignee: Jürgen Fischer	
Category: Vectors	
Affected QGIS version:	Regression?: No
Operating System: All	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 13665
Description	
<p>1. Use the Field calculator to write e.g. 9/17 to an INTEGER field</p> <p>1. In the attribute table you see the real value: 0.529411764705882</p> <p>1. Press the Save button</p> <p>1. The value is updated with the proper one from layer: 1</p> <p>This behaviour is confusing for many users, and also makes the table less readable before saving.</p>
