

QGIS Application - Feature request #3701
eVis: can't create layer from MS Access query

2011-04-04 10:44 AM - Alexander Bruy

Status:	Closed	
Priority:	Low	
Assignee:	Tim Sutton	
Category:	C++ Plugins	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 13760
Description		
<p>eVis throws error when trying create layer from SQL query. To reproduce:</p> <ol style="list-style-type: none">1. create connection to the database2. create query "select * from species". Enter any layer name and don't change coordinate comboboxes3. Get error "Layer is not valid The layer C:/Temp/qt_temp.JC4076?delimiter= &xField=Lon&yField=Lat is not a valid layer and can not be added to the map" <p>Tested with r15645 and r15659</p> <p>I think this is because of latest changes in delimited text provider and here is patch to fix this issue.</p>
