Description

Hi, while compiling latest trunk on ubuntu maverick armv7l I get:

```
[ 61%] Built target compile_python_files
```

```
[ 62%] Generating analysis/sipanalysispart0.cpp, analysis/sipanalysispart1.cpp, analysis/sipanalysispart2.cpp, analysis/sipanalysispart3.cpp
```

```
sip: [[QgsSymbolLayerV]]2Utils::encodeRealVector() unsupported function argument type - provide %MethodCode and a valid C++ signature
```

```
maker2: * [python/analysis/sipanalysispart0.cpp] Errore 1
```

```
maker1: [python/CMakeFiles/python_module_qgis_analysis.dir/all] Errore 2
```

```
make: ** [all] Errore 2
```

I had to patch some part of the code on new wymbology to get rid of some float/double conversions but I don't think they can be related to this error.
