

QGIS Application - Feature request #373

Allow searching of online WMS catalogues

2006-11-07 11:59 PM - Gavin Macaulay -

Status:	Closed	
Priority:	Low	
Assignee:	Brendan Morley -	
Category:	Web Services clients/WMS	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 10432
Description		
<p>The website http://wms-sites.com provides a useful catalog of WMS servers. It would be nice if one could search that list from within qgis, and then display selected layers. Perhaps if there is a standard for catalogs of WMS, qgis could support that too.</p> <p>Qgis could also provide the means to download a catalog of WMS servers and store them in qgis for future use (perhaps into an sqlite database).</p> <p>Thanks to Tim for pointing that website out (http://www.nabble.com/Finding-WMS-Layers-tf2590455.html)</p>

It could be better to browse metadata repositories like geonetwork nodes and selecting layers according to their metadata. This could be a standarized way to look for data in spatial data infrastructures.

Replying to [comment:2 godofredo]:

It could be better to browse metadata repositories like geonetwork nodes and selecting layers according to their metadata. This could be a standarized way to look for data in spatial data infrastructures.

Agreed. Geonetwork supports OGC Catalogue CSW as a discovery standard.

- Resolution set to fixed
- Status changed from Open to Closed

Seems fixed in current trunk. Please check and reopen if not.
