

QGIS Application - Bug report #375

georeferencer turns map but don't translate it

2006-11-10 05:12 AM - anonymous -

Status: Closed	
Priority: Low	
Assignee: Tim Sutton	
Category: C++ Plugins	
Affected QGIS version:	Regression?: No
Operating System: Linux	Easy fix?: No
Pull Request or Patch supplied:	Resolution: duplicate
Crashes QGIS or corrupts data:	Copied to github as #: 10434

Description

I don't know why but when I write world file for a .BMP I can translate raster when I modify the two last coordinates of the world file. After used georeferencer it's not possible (I use georeferencer with Helmert option for turn map). It's like georeferencer stop use of world file associated.

Please could you be more specific about your problem? E.g. how do you translate your raster, what happens normally and what happens after georeferencer has been used etc.

The best would be to provide steps how to reproduce the problem.
