Category:	Projection Support			
Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed	
Crashes QGIS or corrupts data:		**Copied to github as #:**	13816	

Description

"Options>CRS>Coordinate Reference System for new layers>Use project CRS" does not work correctly:

When loading a layer which does not have a CRS, it is set to the *original* project CRS, not the current project CRS. So if I click "File-New Project", then add a layer which does not have a CRS, then change the project CRS, then add another layer, the second layer will be assigned the same CRS as the first layer.

I am using r15740. The behaviour is the same for both raster and vector layers.
