QGIS Application - Bug report #3910
WMS Identify fails to provide a useful error message on failure

2006-03-24 01:11 PM - Brendan Morley -

Status:	Closed		
Priority:	Low		
Assignee:	Brendan Morley -		
Category:	Web Services clients/WMS		
Affected QGIS version:		**Regression?:**	No
Operating System:	All	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed
Crashes QGIS or corrupts data:		**Copied to github as #:**	13934

Description

If the Identify tool is used on a WMS layer but the request fails, the returned error message shows nothing useful.

It's probably a simple problem with the error messages not being passed back properly from [[QgsHttpConnection]] and [[QgsWmsProvider]].

Hi,

the same happens here, when using a proxy:

"Could not understand the response. The wms provider said:
"
(nothing).

SVN checkout date 3 July 2006, full compilation, Proxy used, RHEL4 Linux

Greetings,
Markus

- Resolution set to fixed

- Status changed from In Progress to Closed

I saw a useful error message come back in the HEAD build yesterday, which prompted my lodging of enhancement request #196.

Therefore I must have lodged a fix to this without noticing (!). Closing accordingly.
