

QGIS Plugin Site - Feature request #3986
Support for presenting index.html info about plugins

2011-06-14 04:52 PM - Chris Crook

Status: Priority: Assignee: Category: Pull Request or Patch supplied:	Open Low No	
Description It would be good if the repository had a feature of looking for an index.html file in the plugin zip file and providing a link to this if it exists. See http://www.qgis.org/wiki/Writing_Python_Plugins#Documentation Two things that make this a bit difficult are 1) Security - there is not control on the contents of the HTML file 2) References - eg references to images within the index.html file. Maybe there is a better way of meeting the underlying requirement, which is to be able to provide more comprehensive information about the plugin without installing it.

- Pull Request or Patch supplied set to No

I think first we should define the structure, and add the feature to the Plugin Builder, then adding it to django should be straightforward.
