

## QGIS Plugin Site - Feature request #3986

### Support for presenting index.html info about plugins

2011-06-14 04:52 PM - Chris Crook

<b>Status:</b>	Open	
<b>Priority:</b>	Low	
<b>Assignee:</b>		
<b>Category:</b>		
<b>Pull Request or Patch supplied:</b>	No	
<b>Description</b>		
<p>It would be good if the repository had a feature of looking for an index.html file in the plugin zip file and providing a link to this if it exists. See</p> <p><a href="http://www.qgis.org/wiki/Writing_Python_Plugins#Documentation">http://www.qgis.org/wiki/Writing_Python_Plugins#Documentation</a></p> <p>Two things that make this a bit difficult are</p> <ol style="list-style-type: none"><li>1) Security - there is not control on the contents of the HTML file</li><li>2) References - eg references to images within the index.html file.</li></ol> <p>Maybe there is a better way of meeting the underlying requirement, which is to be able to provide more comprehensive information about the plugin without installing it.</p>		

#### History

- Pull Request or Patch supplied set to No

I think first we should define the structure, and add the feature to the Plugin Builder, then adding it to django should be straightforward.
