

QGIS Application - Bug report #3996
wrong extents in shapefile.

2011-06-17 07:25 AM - Daniel Derrien

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	master	Regression?: No
Operating System:	windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: worksforme
Crashes QGIS or corrupts data:	No	Copied to github as #: 13985
Description I opened a shapefile, selected some features, translated them, then saved my file. I then discovered that the bounds saved in the shapefile were wrong. When I later opened the file (with wrong bounds) in an older version of qgis(1.4.0), and exported it in another file the bound were recomputed and the new file had correct bounds. The wrong shapefile in joined files is named "multi_bati_final", and the one with correctly recomputed bounds "multi_bati_final_with_correct_bounds".

 - Status changed from Open to Feedback

Hello,

what did you mean by bounds (extent of the layer ?) and translated (reprojected ?) ?

Could you still reproduce this bug on a recent version of QGIS ? If it is the case, can you supply at least three layers (in order to easily reproduce the bug):

- the original one (not translated/reprojected).

- the bad translated one.
- the layer that should have been produced by QGIS.

Thanks !

#7 - 2015-12-20 08:57 AM - Giovanni Manghi

- *Status changed from Feedback to Closed*
- *Resolution set to worksforme*

if there was an issue this seems long gone, reopen if necessary.
