Description

QGIS is crashing when trying to edit a PostGIS based layer. Suspect changes that were added to support 64bit ints has caused issues with the postgres provider.

Windows OSGeo4W package qgis-dev-1.8.0-11 is fine but qgis-dev-1.8.0-29 crashes.

Steps to reproduce:
- Load layer from postgis
- Enable editing
- Select node tool
- Click an object

Output from DebugView attached.

Try a current version - commit:c4258c993b57a43427de5f6bacc8b05f71c1117b probably also fixes that.
