| <b>Description</b>   |        |                                     |
| <p>When exporting an image (.png) from the print composer and choosing where to save it, QGIS doesn't show the other .png files already present in the folder. When the name given to the new file is the same as an existing file, QGIS overwrites the file without warning. It's a bit dangerous.</p> <p>QGIS 1.6.0 (french) on UBUNTU 10.10</p> |        |                                     |
