

QGIS Application - Bug report #4045

Seg Fault on open layer properties

2011-07-03 01:49 AM - Nathan Woodrow

Status: Closed	
Priority: High	
Assignee: Marco Hugentobler	
Category: Symbology	
Affected QGIS version:	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 14031

Description

Latest build seems to seg fault when opening the layer properties on a new layer. Reproducible steps seem hard to find. Most of the time it crashes after doing the following:

- Create new layer
- Set layer editable
- Turn off editing
- Open layer properties via double click.

Seg fault info:

```
0x003b7777 in QgsSvgCache::cacheEntry (this=0x9c2e730, file=..., size=18, fill=..., outline=..., outlineWidth=1, widthScaleFactor=3.7795275590551185, rasterScaleFactor=1) at src/core/symbology-ng/qgssvgcache.cpp:315
315   mMostRecentEntry->nextEntry = currentEntry;
```

History

#1 - 2011-07-04 06:44 AM - Nathan Woodrow

- Assignee set to Marco Hugentobler

Seems to be caused by a null mMostRecentEntry at line 315

#2 - 2011-07-04 06:23 PM - Nathan Woodrow

- Resolution set to fixed

- % Done changed from 0 to 100

Fixed in commit:b2c7bae9

#3 - 2011-07-04 06:24 PM - Nathan Woodrow

- Status changed from Open to Closed
