Description

The attributes table is always on top. It also cannot be minimized to the panel. Moreover it doesn't have it's own entry on my windows list.

These make using it problematic. I have to close and open the table back, or move it around so that it doens't cover the part of the display I'm interested in. Being able to to hide and bring it back using alt-tab, as any othet window, is necessary.

Using Gnome 2.14.3 on Ubuntu Dapper, QT 4.2.1 from source.
