Affected QGIS version: master	Regression?: No
Operating System: Ubuntu	Easy fix?: No
Pull Request or Patch Applied: No	Resolution: worksforme
Crashes QGIS or corrupts data: Yes	Copied to github as #: 14096

Description

When I press the "play" button of GDAL Georeferencer (After I've checked my configurations and GCPs) QGIS crashes without any warning.

This happened both with Linear and Polinomial1 transformations - I did not tested with other transformation types.

I replied the experience on a Win7 Professional machine and everything went fine no matter the transformation type choosed. Attached goes the original file.

- Crashes QGIS or corrupts data set to Yes

Not replicable here under both Windows and Linux using both QGIS 1.7.3 and master. It would be useful to attach the GCPs. Please leave feedback.
