<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> duplicate
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 14126
<b>Description</b>		
<p>Hi!</p> <p>If I have a polyline that self-intersects a given point, and if I use the Split Features, instead of just two records I get four, being the extra two resulting of the self-intersection. This leads to unexpected results because you use the Split Feature only once and you get more that you wanted in a place where you had never give a mouse click.</p> <p>Best regards,</p> <p>Pedro Ferreira</p>
