Affected QGIS version:	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: duplicate
Crashes QGIS or corrupts data:	Copied to github as #: 14126

Description

Hi!

If I have a polyline that self-intersects a given point, and if I use the Split Features, instead of just two records I get four, being the extra two resulting of the self-intersection. This leads to unexpected results because you use the Split Feature only once and you get more that you wanted in a place where you had never give a mouse click.

Best regards,

Pedro Ferreira
