Does that also happen if you edit the file locally? What are you using to mount the filesystem?

I don't have problem editing the file locally

I'm not sure how i mount the filesystem. I use the "connect to server" option of nautilus (gnome), selecting in kind of service "ssh". The server also provides a samba so i can make a test if you want.

just tested with Ubuntu 14.04, adding a ssh/sftp folder by using the "connect to server" option in the file browser. It all works as expected with qgis 2.4/master, please reopen if necessary.
