QGIS Application - Bug report #432
defaut identification off point area and perhaps ligne depending zoom

2006-12-07 09:13 AM - anonymous -

Status:	Closed		
Priority:	Low		
Assignee:	Gary Sherman		
Category:	Build/Install		
Affected QGIS version:		**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	invalid
Crashes QGIS or corrupts data:		**Copied to github as #:**	10491

Description

on version of that day 2006/12/07 it's possible to read .DBF informations with clic on point or area (and perhaps line) only if points are enough far each others and for areas if they are big enough

History

#1 - 2006-12-08 05:18 AM - Martin Dobias

- Resolution set to invalid

- Status changed from Open to Closed

This seems to work correctly. I guess your problem is that search radius is set inproperly. You can adjust it in Options -> Map Tools -> Search radius.

If this isn't your case please reopen this ticket and include some details to help us to reproduce the problem.
