- *Target version deleted (Version 1.7.1)*
- *OS version deleted (Debian Squeeze 6.0.2)*
- *Operating System deleted (GNU/Linux)*

The QGIS overview is very bugged. The threading branch of QGIS seems to fix a few of the issues, this crashes in particular.

Meanwhile use the "openlayers overview" plugin. Not the same thing (it show only layers from the OL plugin, so Google, Yahoo, Bing, etc.) but at least it works.

- *Category changed from Symbology to Map Canvas*
- *Crashes QGIS or corrupts data set to Yes*
- *Affected QGIS version set to master*
- *Priority changed from Normal to 6*

still true on qgi-master on both linux and windows/osgeo4w.

Beside this issue the QGIS overview seems to work much better and more stable than the last time I tested it (that was basically useless)
