History

#1 - 2011-11-08 07:20 AM - Martin Dobias

Applied in commit:627d25c6

btw. the easiest way how to provide patches (when you host your fork on github) is to do a pull request.

#2 - 2011-11-08 07:20 AM - Martin Dobias

- Resolution set to fixed
- Status changed from Open to Closed

#3 - 2011-11-08 07:32 AM - Sandro Santilli

Thanks.

Note that I'm intentionally avoiding the "github way" as I believe it's a bad habit to rely on proprietary tools (and graphical interfaces too, but that's a minor thing).

Once you add a remote pointing to my fork pulling the change is as easy as  
"git pull strk labelui"  
or whatever I advertise as the branch containing the contribution.

Okay - didn't know it was intentional. Anyway in my opinion rather than "relying" on the proprietary tools (github) we may use them to increase the productivity... we can stop using it any time. For small patches the pull requests are really useful - one click to merge instead of having to add remotes, do pulls/pushes and review changes in terminal.
