

QGIS Application - Bug report #4456

Segfault in Ubuntu 11.10 Oneiric Ocelot

2011-10-28 06:11 AM - Matteo Fortini

Status: Closed	
Priority: Normal	
Assignee:	
Category:	
Affected QGIS version:	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 14386

Description

QGIS randomly segfaults, for example while switching back to "old symbols" for a layer, or reopening a project. While running, every mouse movement spits out this warning:
Warning: Creating accessible with different object than the original interface!

I tried running it on Debian Sarge and all goes well.
I tried both the UbuntuGIS and the nightly build versions.

On startup this is the output:
Warning: loading of qt translation failed [/usr/share/qt4/translations/qt_it_IT]
Debug: Connected to accessibility bus at: "unix:abstract=/tmp/dbus-lz4xvjJTDG,guid=63acd74073c0afb1bd0f9f1c00000053"
Debug: Registered DEC: true
Python support ENABLED :-)

Warning: Requesting child objects for an interface that is a virtual child itself.
Warning: QAccessibleWidget::rect: This implementation does not support subelements! (ID 3 unknown for QTextEdit)
Warning: Requesting child objects for an interface that is a virtual child itself.

I also tried running without plugins, but no luck.

History

#1 - 2011-10-28 06:13 AM - Giovanni Manghi

I am running QGIS-master on Ubuntu 11.10 (on different machines) and I don't see this problem. Clean install? from the nightly build repo? self compiled? it happens with any kind of datasets?

#2 - 2011-10-28 06:35 AM - Matteo Fortini

It started today, and it doesn't go away. My ubuntu is 11.10 amd64 and I installed qgis both from the ubuntugis ppa (1.7.1) and the qgis nightly build repo (1.8 trunk).

The dataset is on a postgres db (8.4), but I can make it crash also loading geotiffs.

I'm on the point of reinstalling everything from scratch, even if it would be a looong day.

#3 - 2011-10-28 07:53 AM - Giovanni Manghi

you may want to try a Virtual Machine first ;) there are plenty already available made with different Linux distributions...

- Status changed from Open to Feedback

#5 - 2011-12-09 08:41 AM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Feedback to Closed

Not confirmed here. Seems a local problem. Please reopen if appropriate.
